### BOOK II - DIFFICULTIES REVIEW - AIRBORNE CONTAINS THE FOLLOWING VOLUMES

VOLUME I AIRFRAMES

\*VOLUME H ABORT SENSING AND IMPLEMENTATION SYSTEM

VOLUME III AUTOPILOT

\*VOLUME IV AUXILIARY POWER SOURCE

**VOLUME V** 

ELECTRICAL

\*VOLUME VI GUIDANCE

VOLUME VII HYDRAULICS \_\_\_\_

VOLUME VIII INSTRUMENTATION

VOLUME IX PNEUMATICS

VOLUME X

PROPELLANT UTILIZATION

VOLUME XI PROPULSION INTERFACE

VOLUME XII PROPULSION

VOLUME XIII RANGE SAFETY COMMAND

\*VOLUMES II, IV AND VI UNDER ONE COVER.

### GENERAL INFORMATION

The Difficulties Review encompasses problems gathered from the factory, the field, (ETR and WTR) and UTP. The factory difficulties are limited to "selloff" and rerun composite testing.

In the UTP area, the difficulties were excerpted from Central Test Control Reports, Problem Reports, Supplementary History Sheets and Problem Review Reports.

Field problems for the Difficulties Review have been limited to captive flights, flight readiness firings, actual countdown dual propellant loading, quad tanking, component reliability testing, and flight acceptance composite tests. Difficulties called out in the search for critical weakness program was not documented.

GSE problems shall be limited to ETR Complex 12. 13. 36A and 36B for the present edition. Hereafter only booster difficulties shall be maintained.

Failure analysis reports cover difficulties from the field and factory and may complement the information above.

The GSE Difficulties Review, Book 1 contains 14 Volumes, one volume for each system, under one cover. Each volume is appropriately indexed.

The Airborne Difficulties Review, Book 2 contains 13 volumes. Each volume is under separate cover except Volumes II, IV and VI. Volumes II, IV, and VI are under one cover because of the limited material contained in each volume. All volumes are appropriately indexed.

A guide to facilitate interpretation of data in the Difficulties Review (GSE and Airborne) is part of each book or volume.

Subject:

Explanatory Information For Use of Difficulties Review (DR)

Data Tab Runs

This information has been prepared to facilitate use of the <u>DR</u>. It is not intended to describe how the DR was prepared nor the scope of the existing effort.

The Difficulties Review (DR) is presented on a form compatible with automated data processing and printout.

Appearing at the top of the page (outside of blocked-in areas) is the identification of the system and whether it is Airborne or Ground Support Equipment. Appearing with this identification is the date of the document and the page number.

On the right hand side outside of the blocked area, appears the <u>abstract number</u>. An abstract number is assigned to each item of the Difficulty Review to facilitate traceability to the original input document.

Appearing under the major identification are blocks wherein the information on component or system difficulty is identified and explained. Attached are samples of pages coded for reference to the following definitions and explanations:

### CODE EXPLANATION

(1)

This group of blocks callout system, subsystem, test/report number, failed component name, difficulty (Dif) data source, and GDC part number if applicable. Also called out here is the vehicle number, if applicable, and the date of difficulty.

In the same row, the <u>site</u> location, and in case of a flight, captive flight, or countdown, the time will be entered.

The block containing PRI and OTH refer to whether or not the failure is primary or a secondary failure. A secondary failure is to be interpreted as caused by another discrepancy.

The last block in this row is obvious and requires no further explanation:

Refers to a major system of the launch vehicle.

Reters to subsystem of a major vehicle system if applicable, (Booster, sustainer, etc).

# GENERAL DYNAMICS

### Convair Division

CODE	EXPLANATION
4	Is a report number as opposed to type of report, (UTP, Countdown, Flight, FAR, etc.).
5	Is a type of report, such as a FAR, UTP, FRF, etc.
<b>6</b>	Refers to a component part by name.
\$ 8 9	Is a component piece part of the component and referred to by name, (plug, seal, wiring, diode, etc., only where applicable).
8	Is a GDC part number, if applicable.
9	Refers to a site or location at time of discrepancy on the component or vehicle system.
10	Is the vehicle on which discrepancy occurred. Vehicle number listed only if unit was installed on a vehicle at time of discrepancy.
11	Is the vendor part number, if applicable.
12	Is the vendor name, if applicable.
11 12 13	Is the failure caused by other component or other system. This item defines the failure as secondary or not secondary.
14	Refers to the primary failure. If item is labeled no, then item (13) may appear as a yes.
	Should item (13) appear as a yes, then an abstract will have been written to identify the cause of failure effecting the component referred to in the Difficulty Review, Item 6. It should be noted that
	a multiple failure may be recorded in these blocks, (yes/yes), or if a failure did not occur, (no/no).

### GENERAL DYNAMICS

Convair Division

# CODE EXPLANATION

- Defines the system effect. This effect is the result of the failure mode assigned to the component.
- Defines the vehicle effect. This effect is a result of the failure mode and the result of the system effect.

  It should be noted that corrective action may be taken whether or not
- 18) \*\*s the corrective action. Taken by GDC, the vendor, or both.

the failure was confirmed.

FAILURE HODE-OLT OF SPECIFICATION-PER EOP 308.7 THREE DISCREPANCIES MERE REPORTED-WHEN RUMNING THE PROOF PRESSURE F EST AT 4000 PSIL. THE ACTUATOR EXTENDED HARD OVER AND WOULD NOT RETRACT. ACTUATOR WOULD NOT RESPOND TO IMPUT SIGNALS . SCHE SAFETY WIRE ON THE SERVOYALVE WAS FOUND CUT. FAILURE CONTINUED. MOMENTE IT SHOULD BE CONSIDERED AS INCORRECT DISPOSITION OF PREVIOUSLY KNOWN FAILED MARDMARE THAT SHOULD HAVE BEEN BCRAPPED OR REMOKED.

CORRECTIVE ACTION-MATERIAL REVIEW PROCEDURE WILL BE REVISED.

FAILURE MODE-OUT OF TOLERANCE, BY ACCUMULATOR PRESSURE CURVE FOLLOWED THE MORMAL PATTERN UNTIL E.O SECONDS WHEN IT AGE CAS ABRUPTLY FROM A WOMINAL 3093 PSIG. PRESSURE REMAINED BETWEEN 3300 AND 3400 PSIG UNTIL SHUTDOMN, EXCEPT FOR CICA SIONAL UNACCOUNTABLE TRANSIENT PEARS AS HIGH A 4000 PSIG. IMMEDIATE CAUSE OF HIGH PRESSURE AND TRANSIENT PEARS WAS NOT ESTABLISHED. IT IS BELIEVED TO ALSULT FROM FAULTY OPERATION OF AIRBORNE HYDRALLIC PUMP ON PUMP COMPENSATION.
